

**Saxena, Madhurima**

Senior Consultant

Manager: Joshua Ramirez

Evaluated By:

**2025 EOY**

Organization: Joshua Ramirez (Joshua Ramirez)

Location: San Francisco, CA

01/01/2025 - 12/31/2025

## Outcomes & Competencies

Document outcomes such as target expectations and achievements against those targets (utilization, sales, etc.). If target expectations differed between H1 and H2, specify and speak to each separately.

### Manager Evaluation

**Rating:** Meets Expectations

**Response:** For 2025, Madhurima has achieved a utilization of 86.3%, relative to a target of 85%. As a result, Madhurima has achieved a rating of Meets Expectations for the outcomes component of her 2025 evaluation.

For my part, as her people leader, I want to thank Madhurima for being proactive and engaged with respect to staffing motions, particularly since she joined my reporting tree. Slalom's mid-year re-organization added additional friction to staffing efforts as new business processes took hold, but Madhurima was nevertheless able to keep herself well-utilized across the year.

### Employee Evaluation

**Response:**

#### Achievements Against Targets (Utilization, Sales, Internal Impact)

- **Utilization: 85%**, consistently delivering across high-visibility accounts.
- **Certifications:** Databricks Data Engineer Associate (strengthened Slalom's technical credibility).
- **Badges Earned:**
  - Advantages of Expanding EDW with Data Intelligence
  - Financial Services Industry Specialization for GenAI & LLM
  - Advantages of Data & AI Governance
  - Advantages of Being GTM Ready & the Art of the Possible
- **Internal Involvement:** Participated in Databricks Lunch & Learn sessions and contributed to internal knowledge growth.

Document examples of impact achieved against your me@slalom core competencies.

### Manager Evaluation

**Rating:** Above Expectations

**Response:** For 2025, Madhurima has achieved a Core Competencies rating of Above Expectations, supported by her strong client delivery; her ability to step into leadership gaps; her active cultivation of relevant skills; and the expertise she has brought to complex data architecture programs.

### Employee Evaluation

**Response:** **Lead**

- Mentored and coached team members across projects, especially during Salesforce GIC discovery and architecture assessment.
- Acted with urgency to fill capability gaps and maintain client confidence.
- Recognized with the Team Moghul Award for raising the technical bar and filling a critical data gap.

- Across engagements, Madhurima has consistently demonstrated leader-like qualities within her delivery teams, and the adaptability to support both engineering and architectural outcomes, beyond those of a more specialized data engineer. During the Salesforce GIC discovery and architecture assessment, she proactively addressed capability gaps, maintained client confidence, and provided steady mentorship to team members. At the same time, her guidance during architectural discussions and technical deep dives was repeatedly highlighted by peers and clients, and her work was ultimately recognized through a Team Mogul Award.

Meanwhile, at Google (REWS), Madhurima successfully delivered end-to-end architectural designs, resolved PII/privacy requirements, and produced structured solution design documents with minimal direction while maintaining strong stakeholder rapport. Her delivery alleviated the account team from direct involvement, and instilled confidence in client stakeholders of Slalom's value and ability to deliver.

- In conjunction with her delivery execution, Madhurima has also strengthened Slalom's advisory presence at Salesforce by building trust with engineering, analytics, and executive stakeholders. Her clarity in articulating architectural trade-offs, data governance implications, and long-term platform considerations positioned her as a reliable strategic partner, and allowed her impact to multiply beyond the remit typical of a Senior Consultant. She also played a key role in uplifting the Salesforce GIC Analytics team, supporting both developers and C-suite leaders with thoughtful coaching and structured recommendations.

## **Grow Slalom**

- Built deep trust with Salesforce stakeholders, becoming a trusted advisor for North Star Architecture alignment and data governance.
- Extended client engagement through reliable delivery, strategic guidance, and strong executive communication.
- Supported capability uplift for the Salesforce GIC Analytics team by advising developers and C-suite stakeholders.

## **Grow Expertise**

- Earned industry certifications and partner badges demonstrating commitment to continuous learning.
- Led solution architecture across Salesforce and Google programs, applying expertise in data strategy, privacy, and compliance.
- Actively contributed to partner L&L sessions (Databricks).

## **Deliver Exceptionally**

- Led Slalom's 2-member discovery team at Salesforce GIC — interviewing cross-functional teams, auditing data assets/ pipelines, validating issues with analytics and SOX teams, and quantifying gaps.
- Recommended future-state data architecture options (S3 + Snowflake vs. S3 Lakehouse) and guided clients through trade-offs, strengthening trust and extending engagement.
- Partnered with Salesforce DET enterprise architects to align on a global North Star Architecture and deliver a scalable Snowflake-based design.
- Defined end-to-end data flows, ownership, and governance models supporting stable SOX reporting and improved compensation analytics.
- Improved Snowflake RBAC and clarified data stewardship, becoming a trusted governance advisor.
- At Google REWS team, designed the end-to-end data architecture, resolved PII/privacy requirements, and delivered detailed requirements + solution design documents that aligned the WEPS UX stakeholders.

- Beyond core delivery, Madhurima has also contributed architectural insights to initiatives at Genentech, Salesforce–Informatica, and California Community Colleges – again, beyond the scope of what we expect of our Senior Consultants – and furthermore supported ProofPoint discussions around ingestion and architecture.
- Finally, Madhurima has continued to advance her expertise through industry certifications, partner badges, and participation in Databricks knowledge-sharing sessions. She has been opportunistic in channeling these learnings internally by supporting DBX Data Engineering learning sessions, and helping colleagues prepare for certification. Lastly, she has also been highly engaged on the topic of professional development as an ongoing concern over the course of our regular 1:1's; her interest and time investment has been apparent and demonstrable across my time as her PL.
- Operated with minimal direction, translating ambiguity into structured deliverables while maintaining strong rapport with Hong and Sarah.

#### Cross-Functional Impact & Pre-Sales

- Provided architectural guidance and inputs for the Genentech gRED Sales initiative.
- Contributed to the Salesforce–Informatica Merger RFP, designing system mappings, data-flow consolidation, and a risk-aware migration roadmap.
- Participated in a California Community Colleges data strategy workshop proposal.
- Supported ProofPoint internal and client discussions on data ingestion and architecture.

#### Broader Internal Involvement

- Participated in DBX Data Engineering learning sessions, helping colleagues prepare for certification.

### Section Summary

#### Manager Evaluation

**Rating:** Above Expectations

**Comment:** In considering both Madhurima's outcomes rating and her execution of Slalom's core competencies, an overall rating of Above Expectations is warranted. Summarizing the year in brief, Madhurima has been able to meet her quantitative role expectations while providing strong value to her clients through reliable delivery and intelligent advisory.

There are a few facets of Madhurima's year in review that rationalized this rating:

1. Her award-winning client delivery, and demonstrated ability to flex between data engineering, architectural, and stakeholder management responsibilities
2. Her client account and pre-sales development and support, which has provided ancillary support to the business through pipeline development
3. Her commitment to continuous learning and capability support, best represented by her latest Databricks certification and involvement

#### Employee Evaluation

**Comment:** In 2025, I delivered high-impact results across multiple strategic accounts, driving strong client outcomes and elevating Slalom's technical credibility. I maintained 85% utilization, earned the Databricks Data Engineer Associate certification, and completed several Data & AI governance and industry-specialization badges. I led key architecture initiatives for Salesforce and Google, including data discovery, SOX/privacy-safe architecture design, and stakeholder alignment across complex cross-functional teams. My leadership on the Salesforce GIC engagement—quantifying data gaps, defining the North Star architecture, and strengthening data governance—established me as a trusted advisor, earning the Team Moghul Award and positive client feedback. At Google WPA, I designed the full end-to-end data architecture, resolved PII/security requirements, and created clear technical requirements that aligned the WEPS UX team

in capability L&L sessions

I've been pleased with the opportunity to mentor and collaborate with Madhurima as her PL since she joined my reporting tree last year, and I'm excited to follow the client projects and self-directed development that Madhurima will continue to work on in 2026. Slalom is fortunate to have her among our ranks.

Thank you for your contributions to our clients, our practice, and our broader business, Madhurima!

and accelerated implementation. I also supported multiple pre-sales efforts (Genentech gRED, Salesforce–Informatica RFP, California Community Colleges, ProofPoint) and contributed internally through Databricks L&L sessions and DBX Data Engineering learning support. Throughout the year, I demonstrated strong technical leadership, values-based collaboration, and a consistent commitment to delivering exceptional outcomes.

## Growth & Development

**How can you continue to drive impactful outcomes and elevate your performance for the coming year?**

### Manager Evaluation

**Response:** Madhurima should sustain her client delivery and professional development; find organic opportunities for leadership and mentorship roles; and continue to engage with me as we strategize the activities that will prepare her for career progression.

### Employee Evaluation

**Response:**

- Increase visibility across Slalom by contributing more to thought leadership, reusable assets, and strategic internal communities.
- Continued support for advanced certifications and partner enablement (Databricks SA, Snowflake Architect).
- 

**What development opportunities (e.g., exposure, education, and/or experiences) would empower your career growth over the coming year?**

### Manager Evaluation

**Response:** Madhurima should continue to engage as a thought partner to strategically select client projects and certifications that will yield disproportionately valuable experience, and support her career goals and areas of interest.

### Employee Evaluation

**Response:**

- Driving growth in our Databricks partnership by contributing to accelerator development and actively participating in the Databricks COE.
