

Saxena, Madhurima

Senior Consultant

Manager: Joshua Ramirez

Evaluated By: Erika Morris

2025 Mid-Year

Organization: Joshua Ramirez (Joshua Ramirez)

Location: San Francisco, CA

01/01/2025 - 06/30/2025

Team Member Reflection

Capture metrics (me@slalom or CDF) achieved to date (utilization, sales, revenue, etc.).

Manager Evaluation	Employee Evaluation
Response: - Performing above target utilization for Senior Consultants (85% Utilization) - No Sales credited in Salesforce (although assisted Data Science Capability team members with a Proofpoint opportunity as related to solution building data architecture proposals for ML use cases)	Response: Utilization: I've been fully engaged on the Salesforce Incentive Compensation program in H1, maintaining a strong 93% utilization while operating in a full-time, high-impact role on a critical track. Client Expansion & Trust: My contributions in Phase 1 directly influenced client confidence and project expansion. In the early phase, I led efforts along with the Slalom team to uncover and present a comprehensive current-state architecture view, highlighting key system gaps and inefficiencies that had previously gone unrecognized. - Tim remarked that he had "never seen such data in all his years at Salesforce" during our walkthrough. - Hong Wu personally thanked me after the walkthrough and explicitly requested that I remain involved in the next phases. - This resulted in the client expanding our scope and responsibilities, with me being asked to take on greater ownership of the data workstream in the next phase. These outcomes not only reinforced client trust in Slalom but also created opportunities to deepen our footprint within a complex enterprise environment at Salesforce.

Highlight the impact and growth you have had so far this year based on your current competencies (me@slalom or CDF) overall.

Manager Evaluation

- Response:**
- Have gained confidence in new areas as sole Data Architect and Data Strategist on engagements
 - Have taken on more responsibilities in engagement and relationship management leading a team of two ICs in addition to your own work
 - Started learning business operations required by leaders within consulting by contributing to sales solutioning, SOW development, run rate calculations, etc.
 - Becoming more comfortable and confident when sharing point of view with both Slalom leaders; respectfully but clearly stating risks and likely outcomes given project challenges

Employee Evaluation

- Response:**
- Over the first half of the year, I've had the opportunity to step into a critical role within the Salesforce Incentive Compensation program, operating at the intersection of data architecture, stakeholder alignment, and team leadership. My focus has been on elevating the maturity of data engineering practices, aligning architectural direction across teams, and ensuring client success despite capability gaps in certain workstreams.
- **Driving Data Architecture Best Practices**
: I identified early that the client's analytics team lacked foundational data engineering standards, which led to fragmented data sources and inconsistent reporting. Drawing on experience from past projects, I introduced data management best practices, held regular working sessions with client stakeholders, and helped embed a more structured and scalable approach. The client acknowledged that I filled a critical capability gap bringing in data architectural thinking that their team was lacking.
 - **Cross-Functional Strategic Alignment:**
As the team operated within a business operations and analytics context, I took the lead in aligning their vision with the broader Salesforce engineering and enterprise architecture ecosystem. I collaborated across teams, presented to C-level leaders and enterprise architects, and secured alignment on a unified data architecture strategy tied to the customer analytics team's long-term goals. This has led to broad consensus across stakeholders on the implementation path forward.

- **Stepping up as a Leader:** When certain workstreams around requirements gathering and project management faced delays due to resource challenges, I stepped in to lead those efforts. I managed client expectations, guided the team through key deliverables, and assumed ownership of areas beyond my initial scope. As a result, the client has increasingly looked to me for leadership including assigning me broader ownership of BRD development reflecting growing trust in my ability to drive outcomes.
- **Steward of the Slalom brand:** Throughout this engagement, I've been intentional about operating in a way that reflects Slalom's brand promise - flexible, trusted, high-impact, and filling critical gaps for our clients. A clear example of this is the trust placed in me by senior stakeholders like Hong Wu, who proactively asked whether I would be involved in strategic planning conversations, such as the architecture roadmap. This reflects how he sees me as a capable data architect filling a key gap in their team.

Rather than simply responding to the immediate technical asks, I recognized early that the client lacked architectural leadership in their analytics organization. I stepped into that space, designed a forward-looking solution, and actively partnered across teams to ensure alignment with broader Salesforce goals. In doing so, I've helped elevate their architectural maturity while keeping delivery grounded and actionable. I've been able to deliver immediate and significant impact while building client capability along the way - an approach that aligns directly with how Slalom aims to show up: not just to do the work, but to leave the client better than we found them.

Together, these experiences have accelerated my growth across Slalom's competency areas, particularly in strategic thinking, delivery ownership, client impact, and informal leadership. I've grown more confident operating in high-visibility, cross-functional settings and am continuing to

build depth in navigating executive conversations and enterprise-scale alignment.

What are a few ways you can elevate your performance in the second half of the year?

Manager Evaluation

- Response:
- Continue being incredibly open to feedback; thank you for taking it to heart and making concerted effort to implement suggestions! It is noticed!
 - Continue working on the growth areas we've discussed: know and tailor your communications/presentations to your audience -- always putting the "so what" front and center, build empathy and understanding of business stakeholders/challenges -- what we build doesn't matter unless we can tie it back to business value, build leadership skills as a leader of delivery teams -- helping individual contributors to understand the context of their work within the client's ecosystem, develop according to best practices, etc.

Employee Evaluation

- Response:
- In the second half of the year, I'm focusing on expanding both the depth and breadth of my impact in the following areas:
- Deeper Business Context Alignment: I plan to continue building a more comprehensive understanding of the business-side functions I support - translating key use cases and organizational goals into more targeted data architecture and reporting models. This will allow me to align solutions more precisely with business outcomes.
 - Tailored, Succinct Presentation: While I've been effective in communicating technical insights, I'm working on being more succinct and audience-specific in how I present information—especially when engaging executive, business, or technical stakeholders with differing needs and expectations.
 - Enterprise Data Governance Leadership : As the client matures their governance practices, I intend to lean further into this area by developing a stronger perspective on how to manage data governance at scale. This includes both designing governance processes and embedding them in the broader enterprise architecture strategy.

These focus areas are intended to help me amplify my influence on cross-functional outcomes, deliver with greater precision, and contribute more strategically at the enterprise level.

Anything else?

Manager Evaluation

Response:

Employee Evaluation

Response: This engagement has been a rewarding experience - both in terms of the impact I've

been able to make and the opportunities it has provided for learning and growth. I've appreciated the trust placed in me by both the client and the internal team, and I've worked to show up with ownership, adaptability, and a solution-first mindset. I'm particularly grateful for the exposure to executive-level stakeholders and complex enterprise-scale architecture conversations, which have helped sharpen my strategic thinking and delivery approach. I look forward to continuing to contribute meaningfully to both client outcomes and Slalom's reputation in the second half of the year.

People Leader Assessment

Is this team member on track to meet their metrics this year (me@slalom or CDF)?

Manager Evaluation

Rating: Progressing as expected

Is this team member on track to meet their competency expectations (me@slalom or CDF) overall?

Manager Evaluation

Rating: Progressing as expected
