All,
I am in need of your assistance to clear my list of pending Outage Reports. Some of these may be for borescopes, no FC FE scope, cancelled jobs or events that were part of a larger outage. Because Yes was selected under Report Required in FSP, the system is showing these as outstanding. If you could take a look at your outages and add a quick comment that "Report is not required" and return your lines it would be greatly appreciated. Your emailed confirmation is required for me to move forward with closeout. Of course if a report was indeed required let me know and we can go from there. Thank you and let me know if there are any questions.
